Vue-Style-Guide

1 Vue属性书写顺序

```
export default {
  mixins,
  data,
  props,
  store,
  computed,
  route,
  created,
  ready,      // => 生命周期顺序不赘述
  event,
  watch,
  components,
  methods
}
```

2 组件

2.1 命名

组件以驼峰命名

```
<template>
  <my-components></my-components>
</template>
<script>
  import myComponents from './myComponents.vue'

  export default {
  components: {
        myComponents
    }
  }
</script>
```

2.2 Vue组件的书写顺序

建议：template script style 的顺序书写

```
<template></template>
<script></script>
```

```
<style></style>
```

2.3 组件引用

```
import myComponentsA from './myComponentsA.vue'
import myComponentsB from './myComponentsB.vue'
import myComponentsC from './myComponentsC.vue'
import myComponentsD from './myComponentsD.vue'
export default {
  components: {
        myComponentsA,
    myComponentsB,
    myComponentsC,
    myComponentsD,
  }
}
```

3 事件

```
<!-- bad -->
<a v-on:click="pass()">pass</a>

<!-- good -->
<a @click="pass">pass</a>
```

4 开发命名规则:

```
1、文件夹：驼峰，首字母小写，如：siteAddress，尽量简洁
2、.js文件规则：驼峰，首字母小写，如：siteAddress.js，尽量简洁
3、.vue文件：大驼峰，首字母大写，如：SiteAddress
4、方法名：驼峰，首字母小写，如：handleAdd
```
