# VSCode 插件配置

安装插件：vetur，eslint，prettier

> 配置eslint规则： 如下图，commond+, 进入vscode配置页，输入eslint，找到Eslint > Trace:Server,点击下方： Edit it setting.json,将如下代码粘贴到配置中，保存即可

```
eslint.trace.server                                                          1 Setting Found
```

DEFAULT USER SETTINGS   USER SETTINGS   WORKSPACE SETTINGS

Place your settings in the right hand side editor to override.   Place your settings here to override the Default Settings.

```
                                                          1  {
 // Traces the communication between VSCode and the eslint    2      "typescript.format.insertSpaceBeforeFunctionPare
 linter service.                                          3      "javascript.format.insertSpaceBeforeFunctionPare
 "eslint.trace.server": "off"                             4      "window.zoomLevel": 2,
                                                          5      // "editor.detectIndentation": false,
                                                          6      "eslint.enable": true,
                                                          7      "eslint.autoFixOnSave": true,
                                                          8      "eslint.run": "onType",
                                                          9      "eslint.options": {
